Research Connection Program

The American Foundation for Suicide Prevention (AFSP) - Massachusetts Chapter

Presents
Short-Term Prediction of Suicidal Behavior

by
Matthew Nock, Ph.D - Harvard University

Hear first-hand what researchers are exploring in the world of suicide prevention. This event features a presentation followed by a Q&A-based conversation, bringing your community together with a leader in the field of suicide prevention research.

About the Researcher

AFSP 2014 Focus Grant Recipient
Professor Nock's research is aimed at advancing the understanding why people behave in ways that are harmful to themselves, with an emphasis on suicide and other forms of self-harm. His research is multi-disciplinary in nature and uses a range of methodological approaches (e.g., epidemiologic surveys, laboratory-based experiments, and clinic-based studies) to better understand how these behaviors develop, how to predict them, and how to prevent their occurrence. This work is funded by grants from the National Institutes of Health, Department of Defense, US Army, and private foundations, and has been published in over 100 scientific papers and book chapters.

Program Details

When

Thursday, July 22, 2021

12:00 - 1:30 pm (eastern)

Location

Virtual Event
